

# WRF-Hydro Development and Performance Testing

Wei Yu, David Gochis, David Yates  
Research Applications Laboratory  
National Center for Atmospheric Research  
Boulder, CO USA

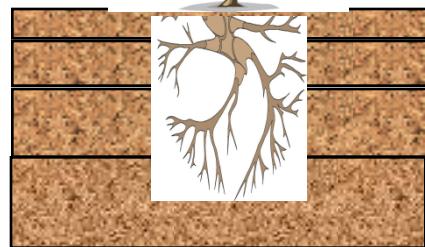

# Scientific Motivation

- How does terrain features affect the spatial and temporal distribution of moisture availability?
- How does the spatial distribution of soil moisture in complex terrain impact land-atmosphere fluxes and convective circulations?
- Flash flooding forecast ?

# Hydrologically-enhanced Land Surface Models

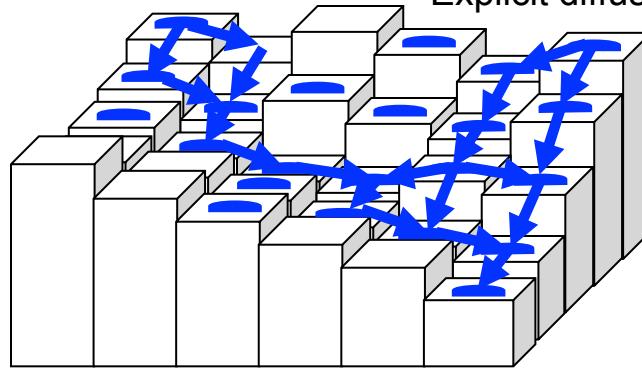

(Gochis and Chen, 2003, NCAR Tech Note)

## Single Column

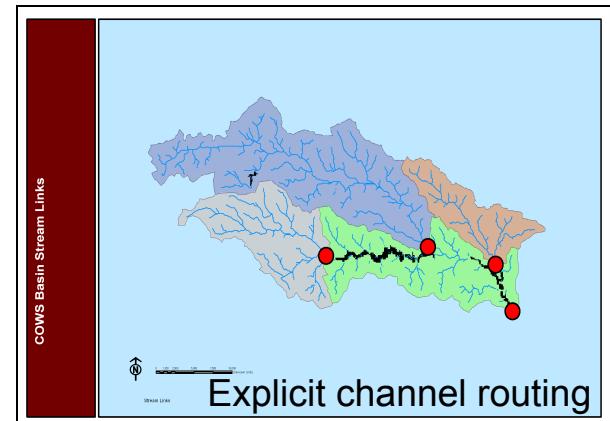

1-D Land Surface  
Models (e.g. 'Noah')

## Land Routing

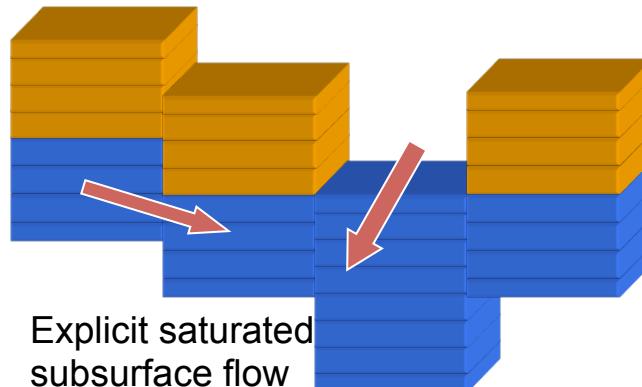

Explicit diffusive wave overland flow

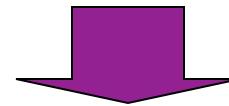

## Channel Routing

## Dynamical Routing Methodologies

Explicit saturated  
subsurface flow

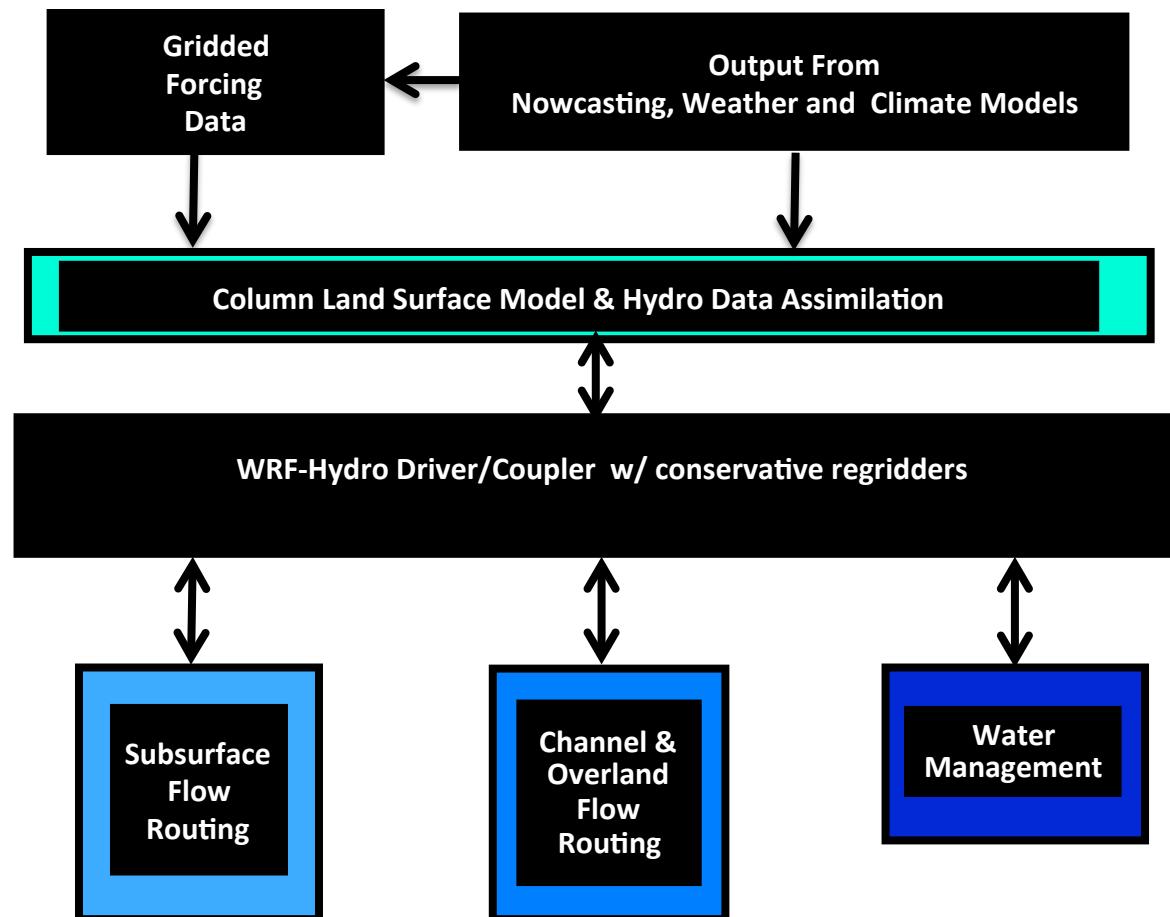

- fully distributed flow/head
- reservoir levels
- distributed soil moisture
- distributed land/atmo fluxes
- distributed snow depth/SWE

# System Function Overview

- WRF-Hydro offline
  - data assimilation/spin-up
  - Forecasting
- WRF-Hydro fully coupled system
  - WRF model
  - LIS system
  - CESM

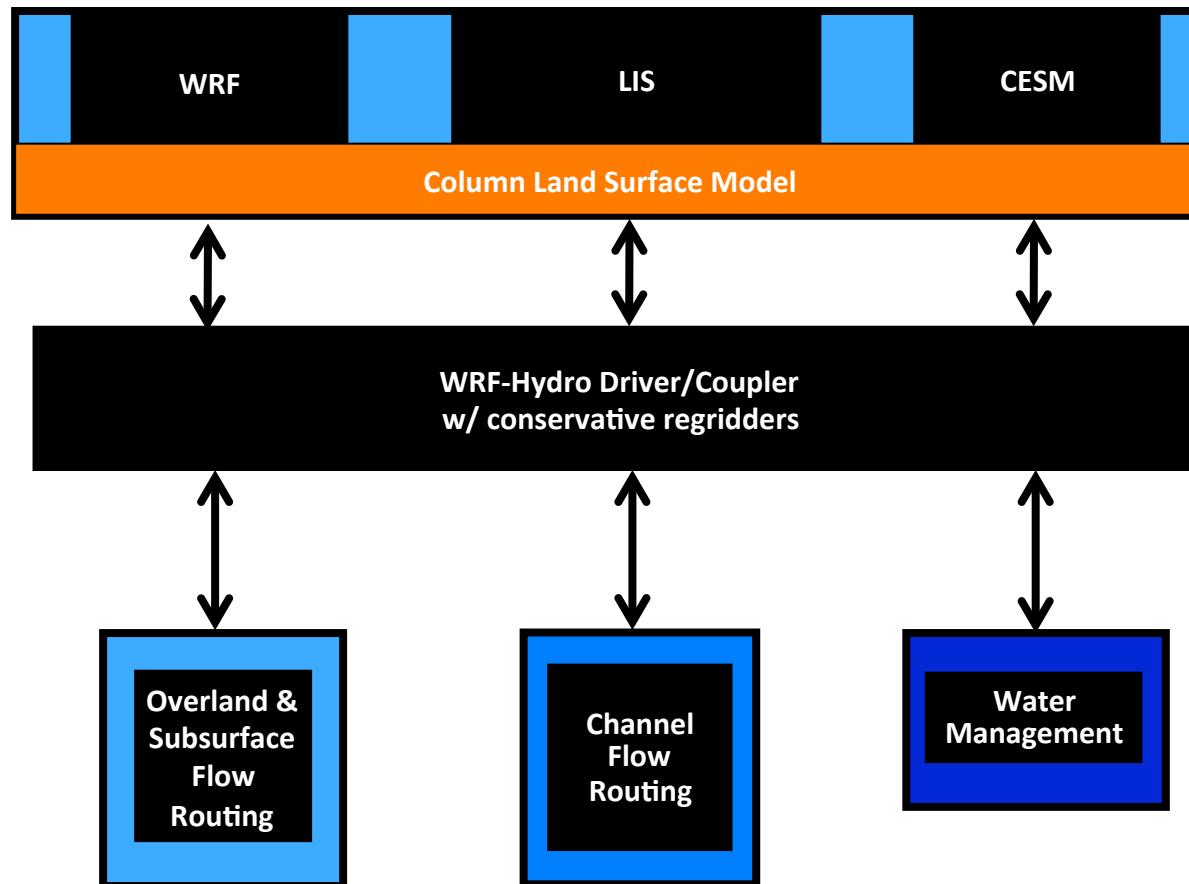

# Conceptualization of WRF-Hydro Off-line

- Multi-scale/Multi-physics modeling...

# Conceptualization of WRF-Hydro Coupling

- Multi-scale/Multi-physics modeling...

# *Parallel Implementation*

# Data Grids

- Three Types of Data Grids

Land Grids: (ix, jx), (ix, jx, n\_soil\_layer)

Land Routing: (ixrt, jxrt), (ixrt, jxrt, n\_soil\_layer)

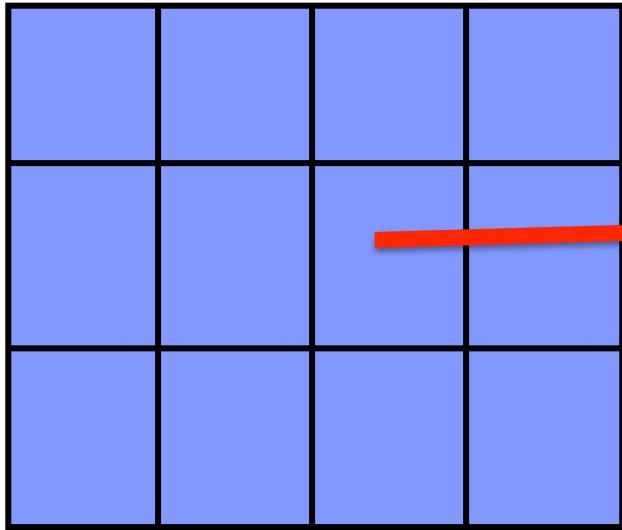

Channel Routing: (n\_nodes), (n\_lakes)

- Parallel Scheme

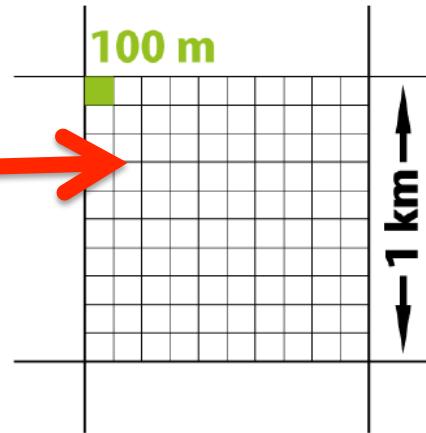

– Two dimensional domain decomposition

– Distributed system (MPI) only

# WRF-Hydro Multi-Grids Domain Decomposition

1 km Land grid

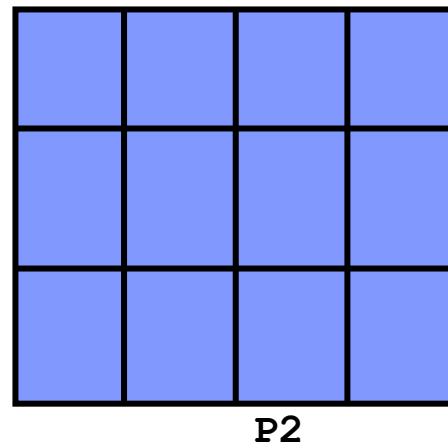

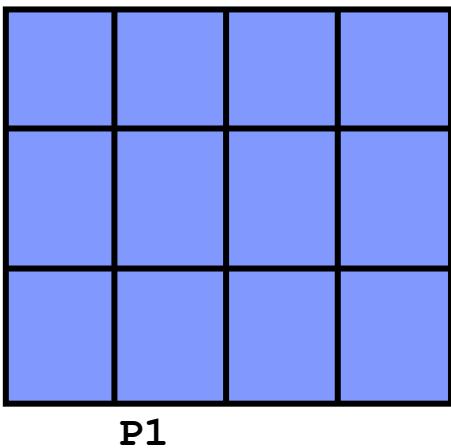

Land routing grid cell: regridding

One CPU: Land grid, land routing grid cell, and channel routing nodes.

# Distributed Memory Communications

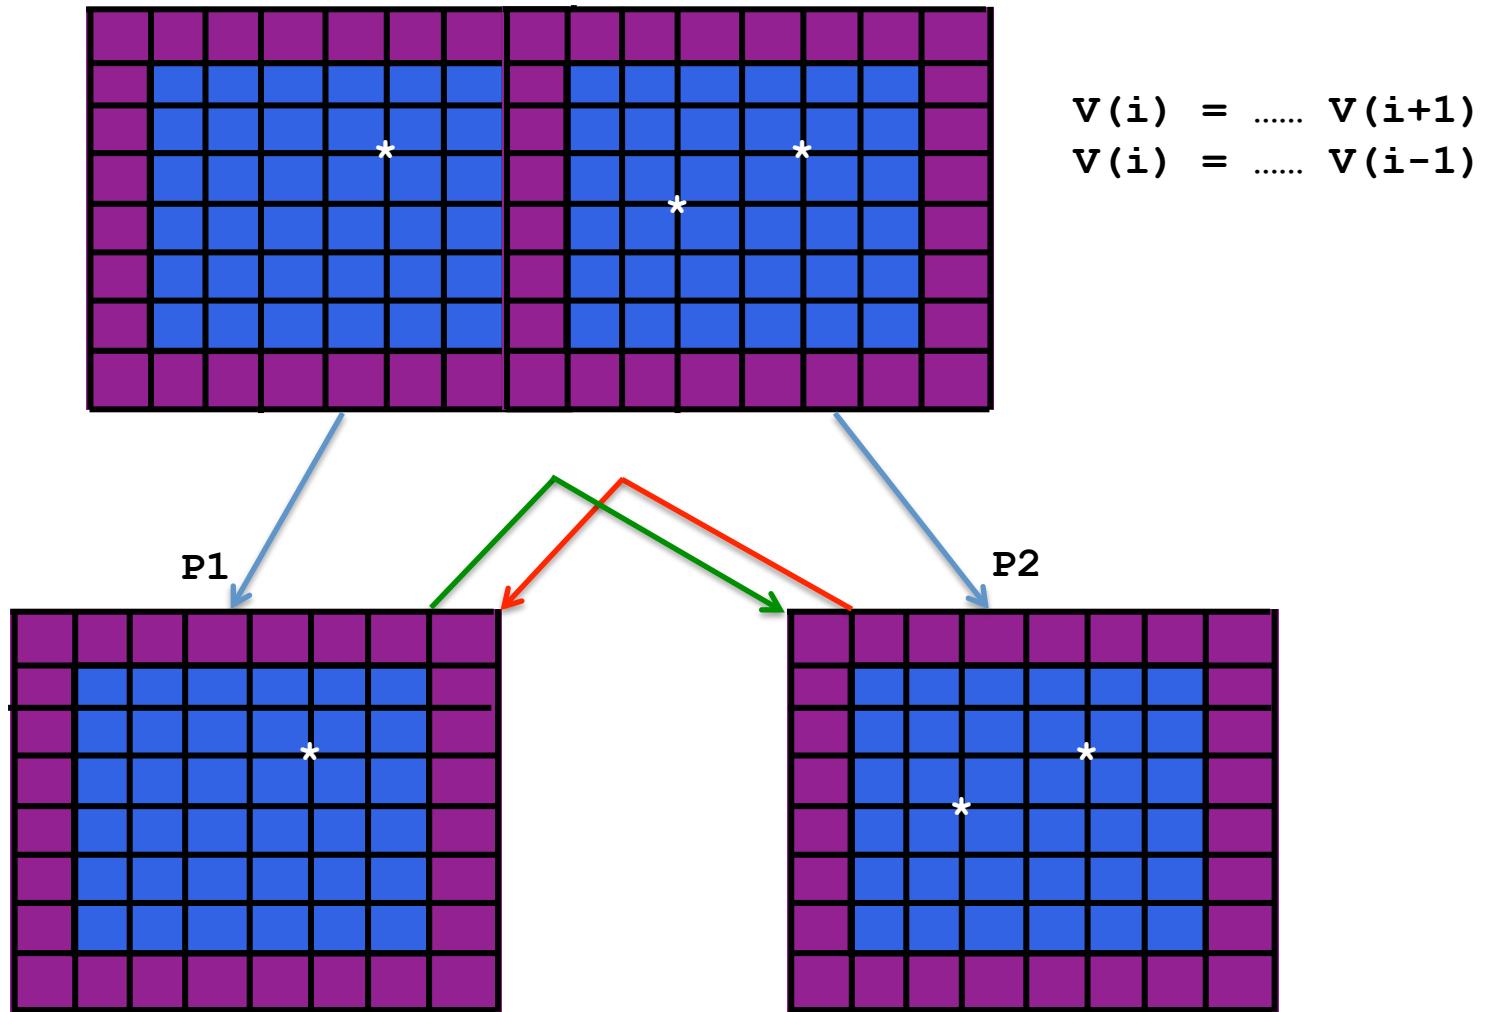

## Land Grid

No overlap of the grids.

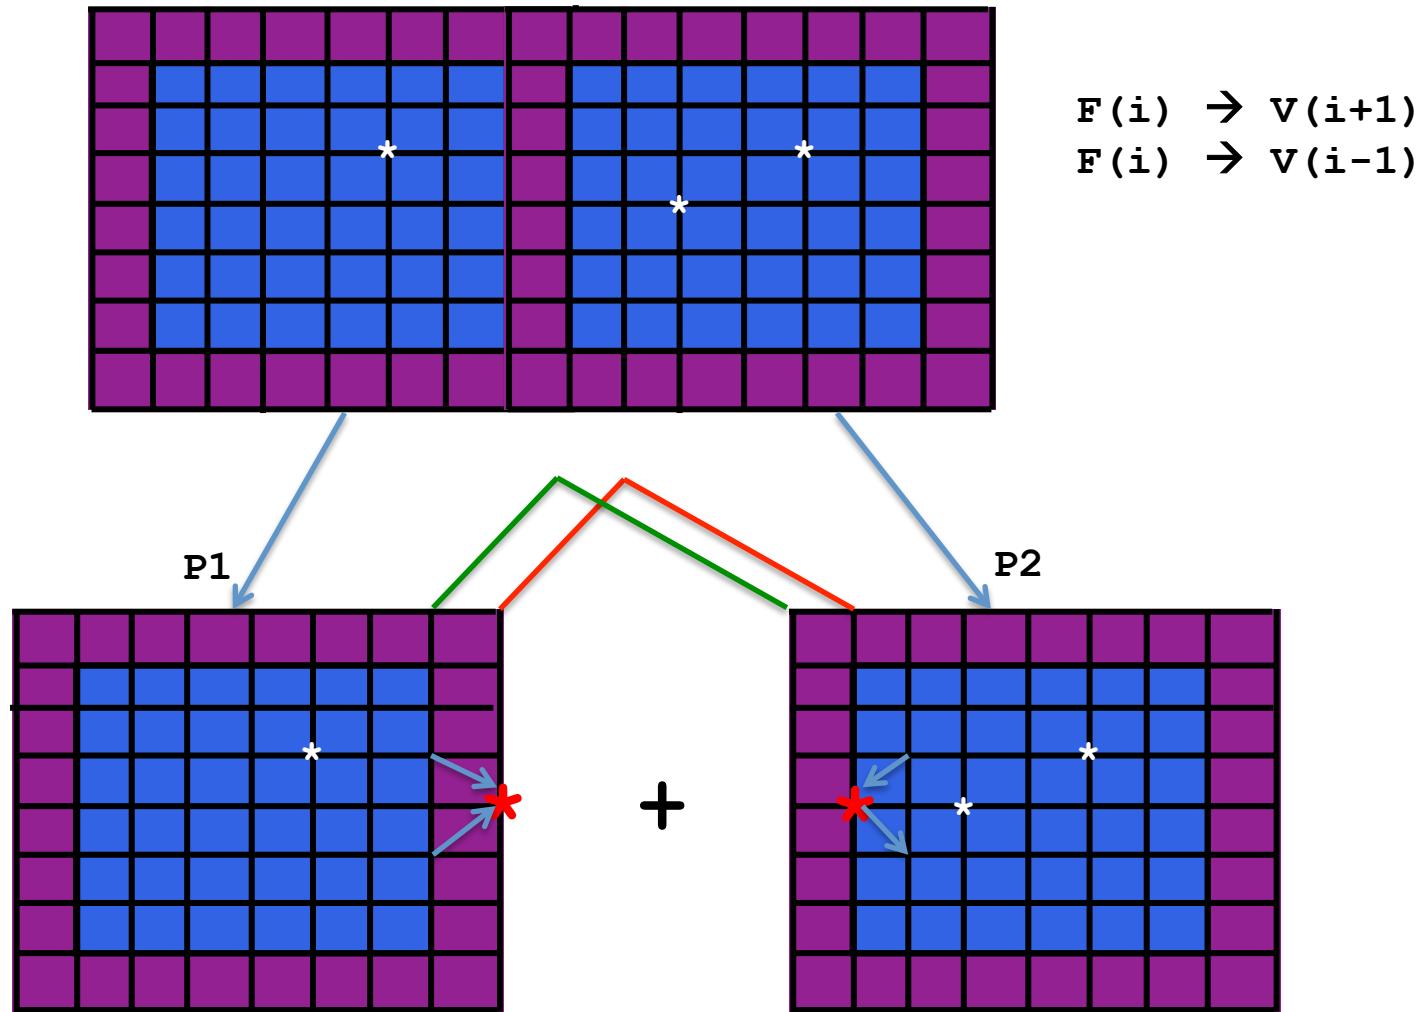

No memory communication between neighbor processors.

# Land Routing Grid Memory Communications (1)

1) Replace the hello variables

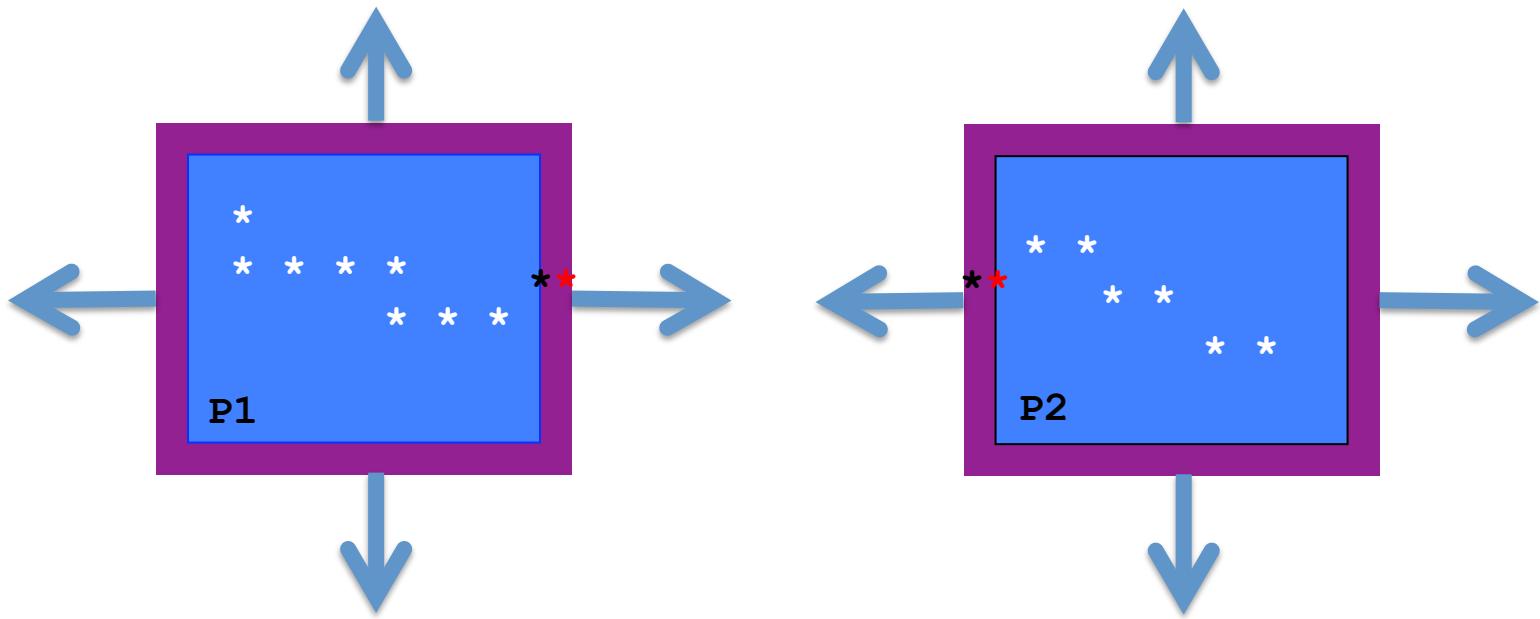

# Land Routing Grid Memory Communications (2)

2) Update the inflow/outflow variables in boundary:  $P_1 + P_2$

# Distributed Memory Communications

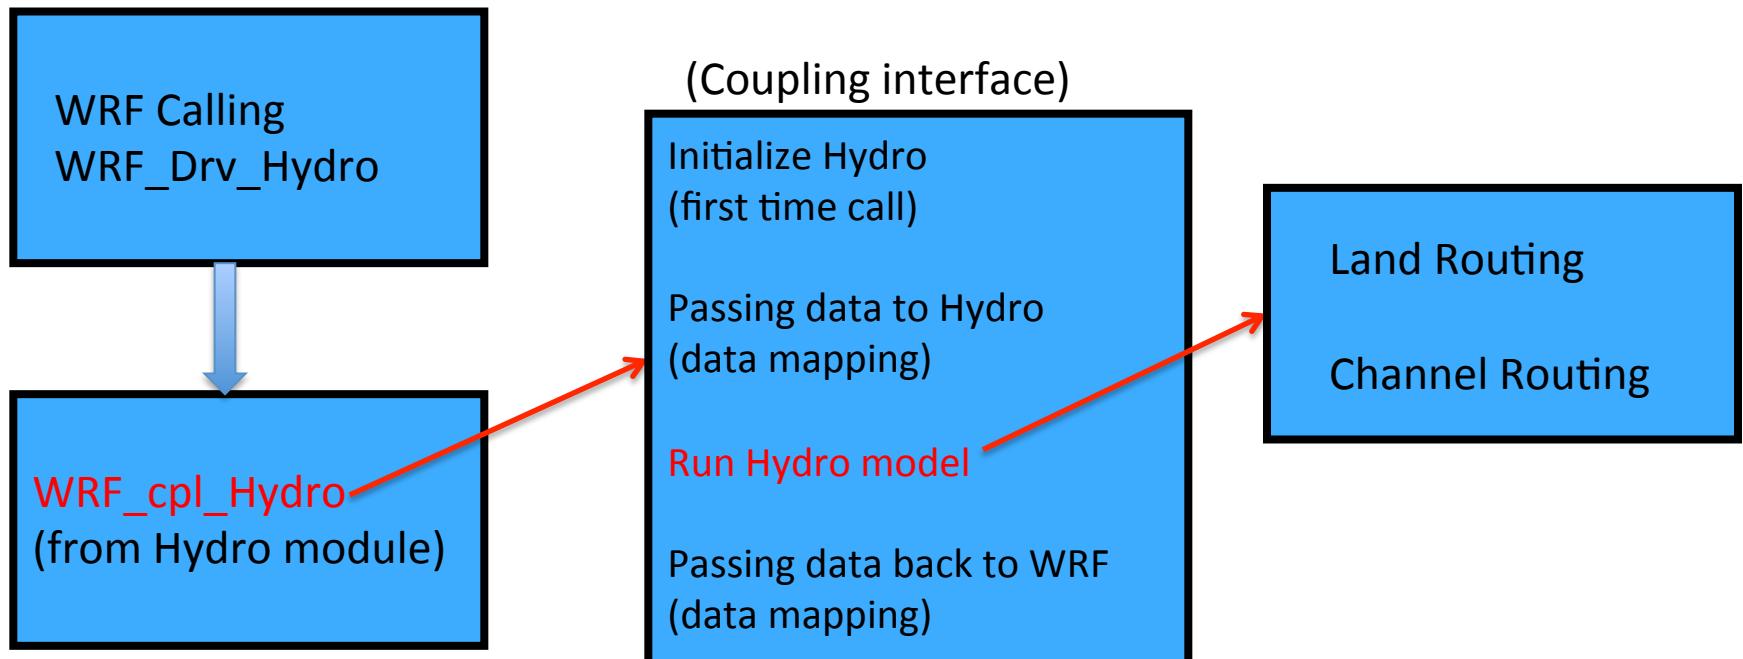

## Channel Routing

Update of red and black nodes for both P1 and P2:

inflow/outflow to red and black nodes in P1 + value from P2

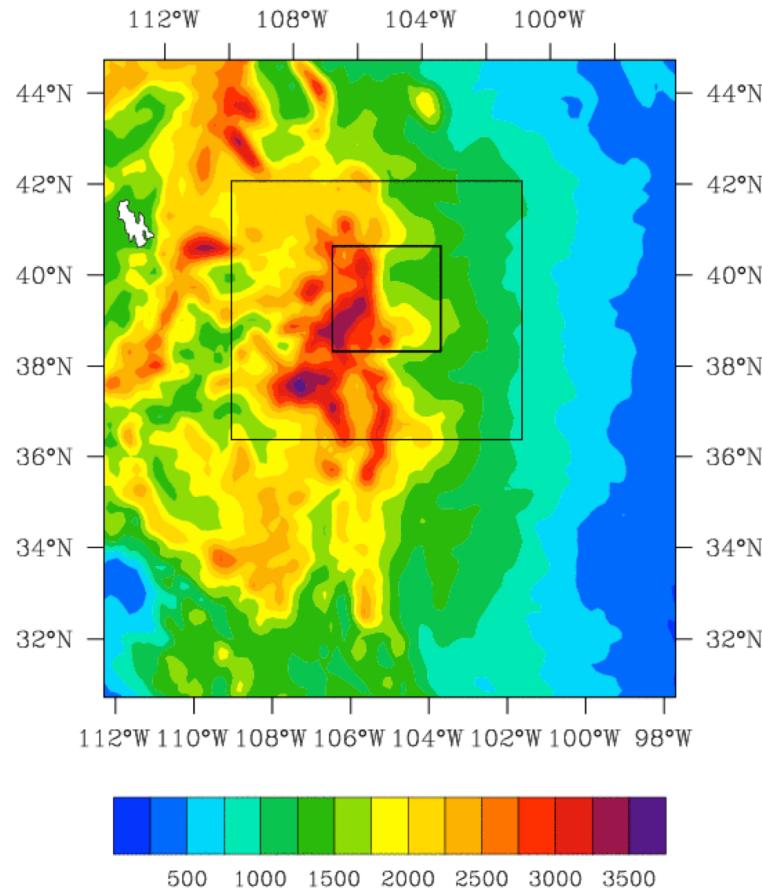

# Implementation of Coupling

# Compiling and Run

- Configure
  - Choose compiler options
  - When coupled with WRF, WRF-Hydro will be controlled from WRF side.
- Compiling
  - WRF-Hydro will always be compiled as a library and called by other components as an external function.
- Run (constant files and one namelist file)
  - Offline
  - Coupled with other systems

# Testing Domain

D1: 16 km (90 x 100)

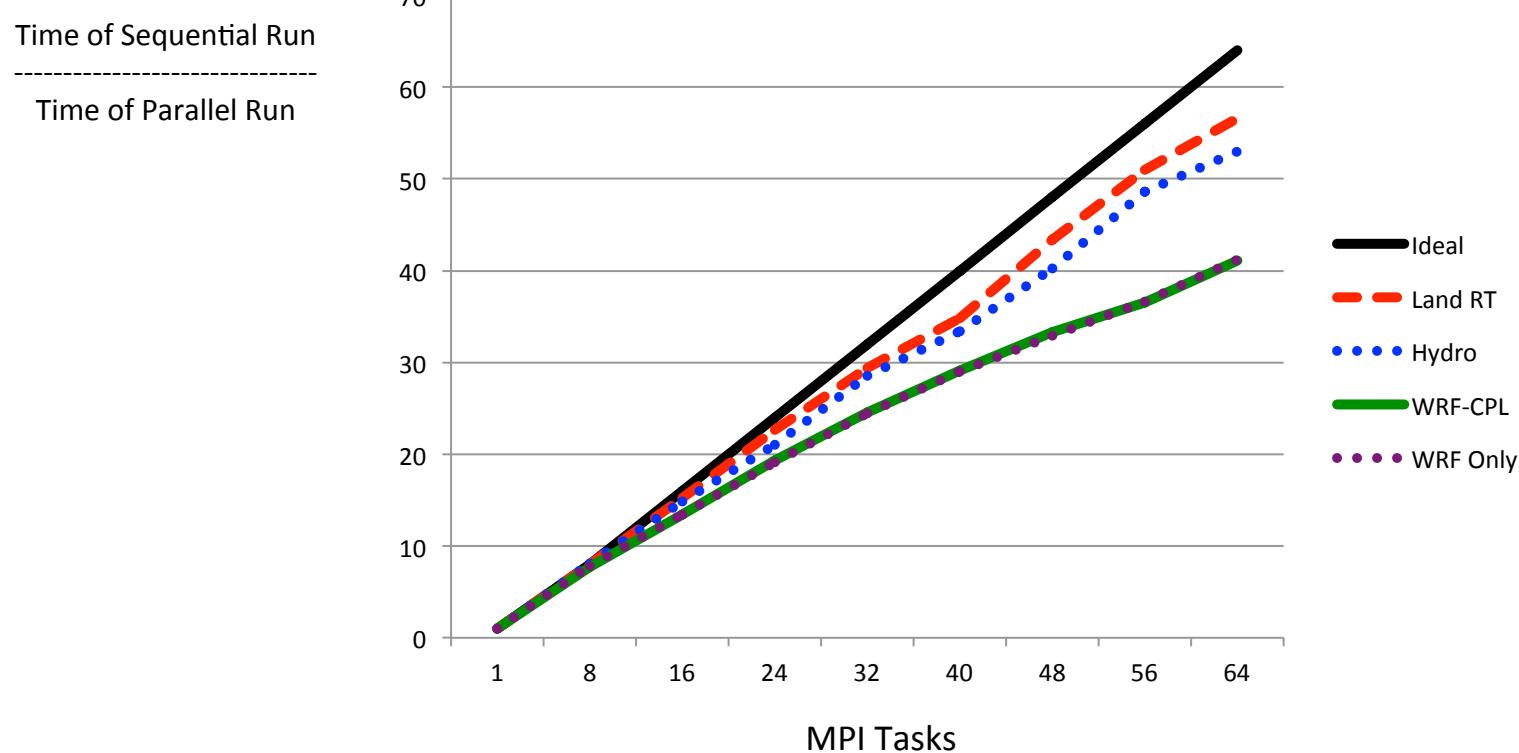

D2: 4 km (181 x 161)

D3: 1 km (269 x 261)

# WRF-Hydro Performance Testing

MPI Tasks	Offline 6 hours forecast (wall clock time: seconds)				WRF (Fully Coupled) 2 hours forecast (wall clock time: seconds)

# WRF-Hydro Performance Speedup

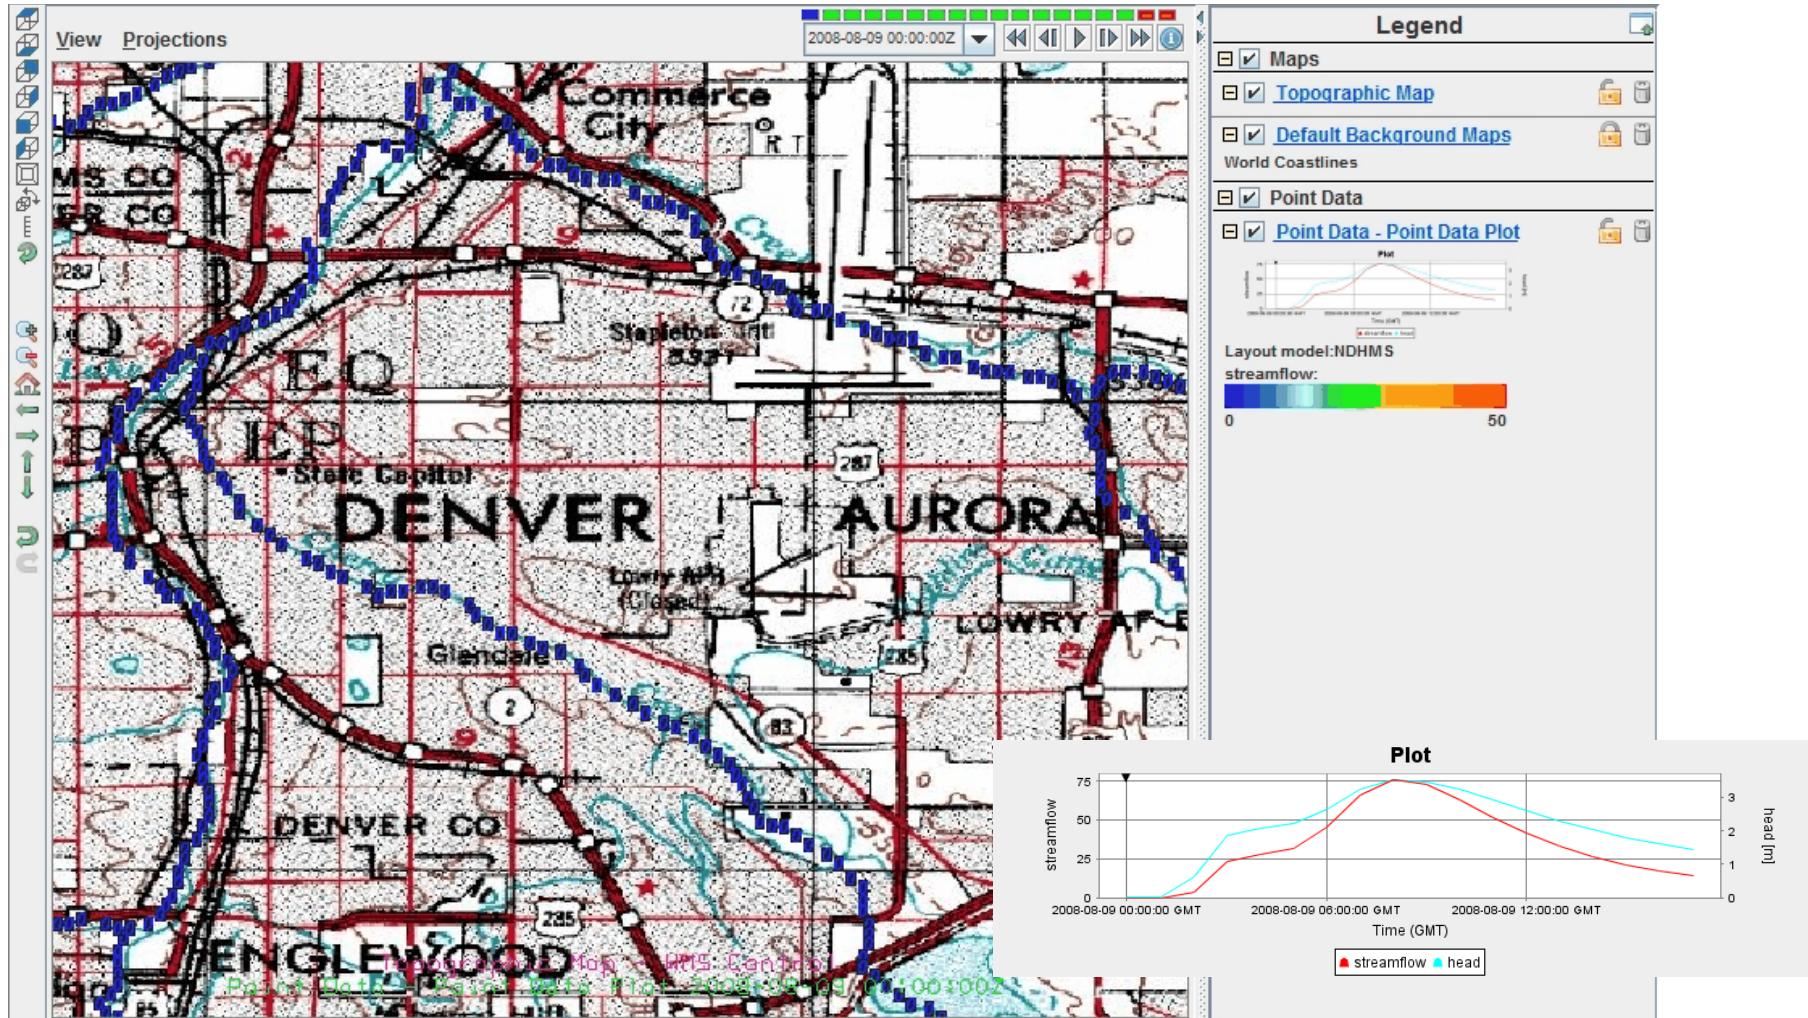

# Scientific Application

First formal release with WRF3.5

- Real time forecast
  - Offline
  - WRF fully coupled system
- Regional Climate research
  - Offline
  - LIS and CESM (CLM) Coupling

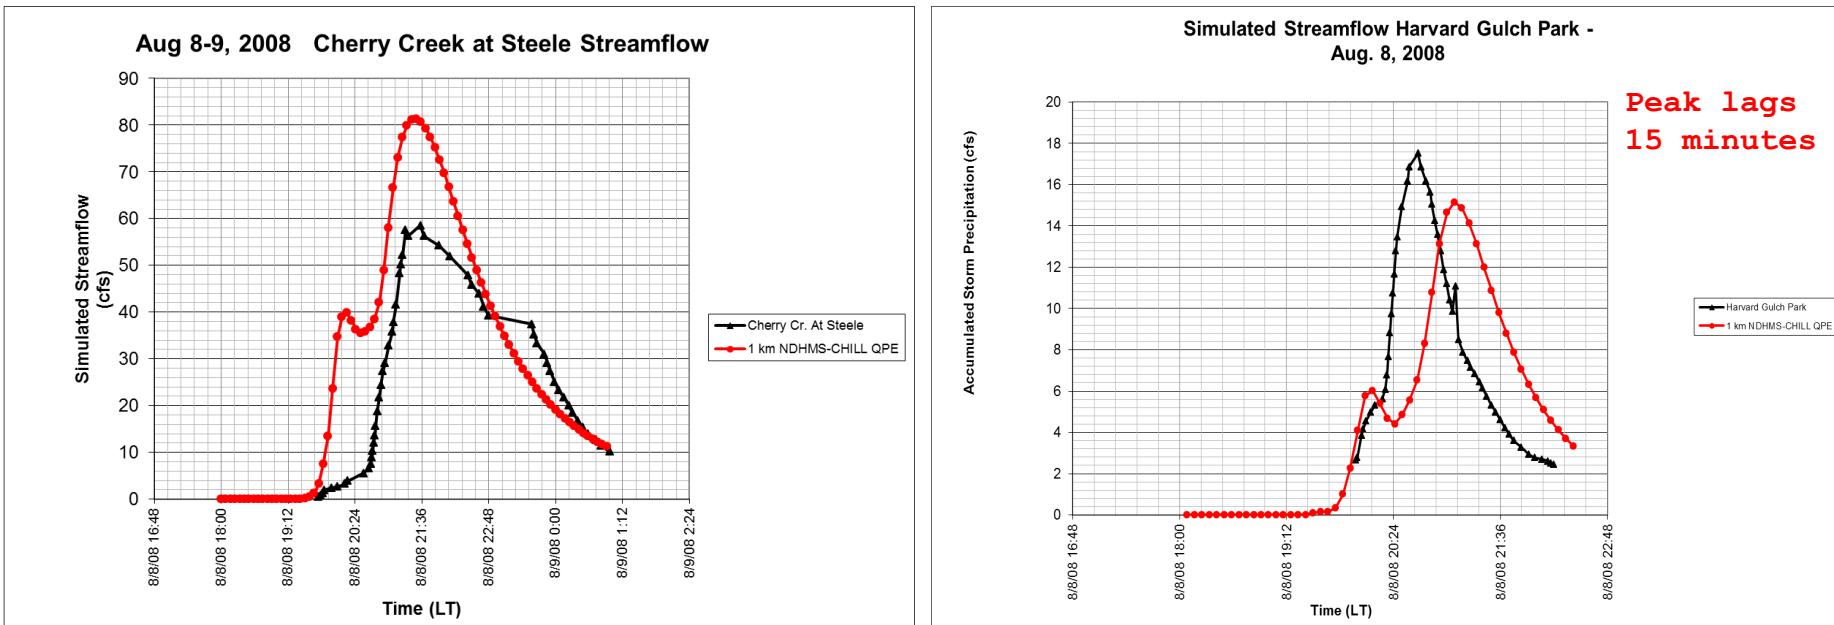

# Initial Results: WRF-Hydro Simulations

- Evaluation of simulated streamflow using multiple precipitation products: Aug. 8, 2008

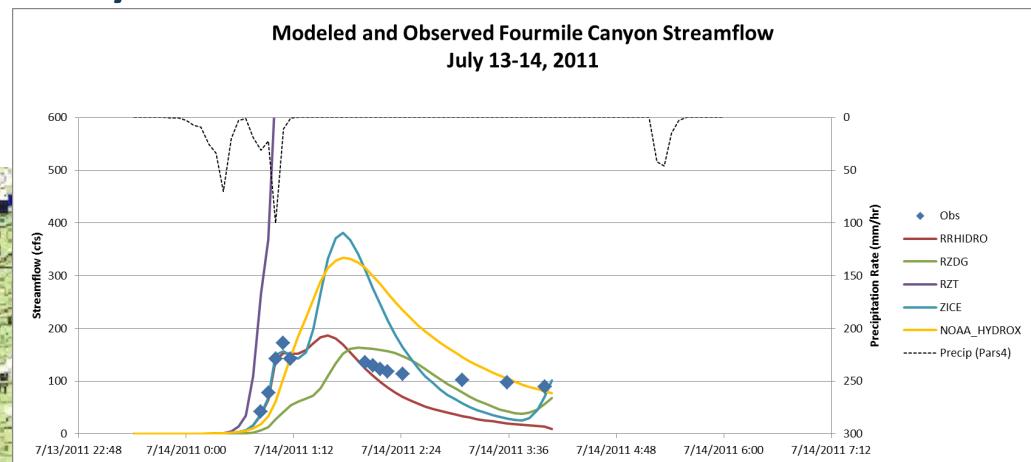

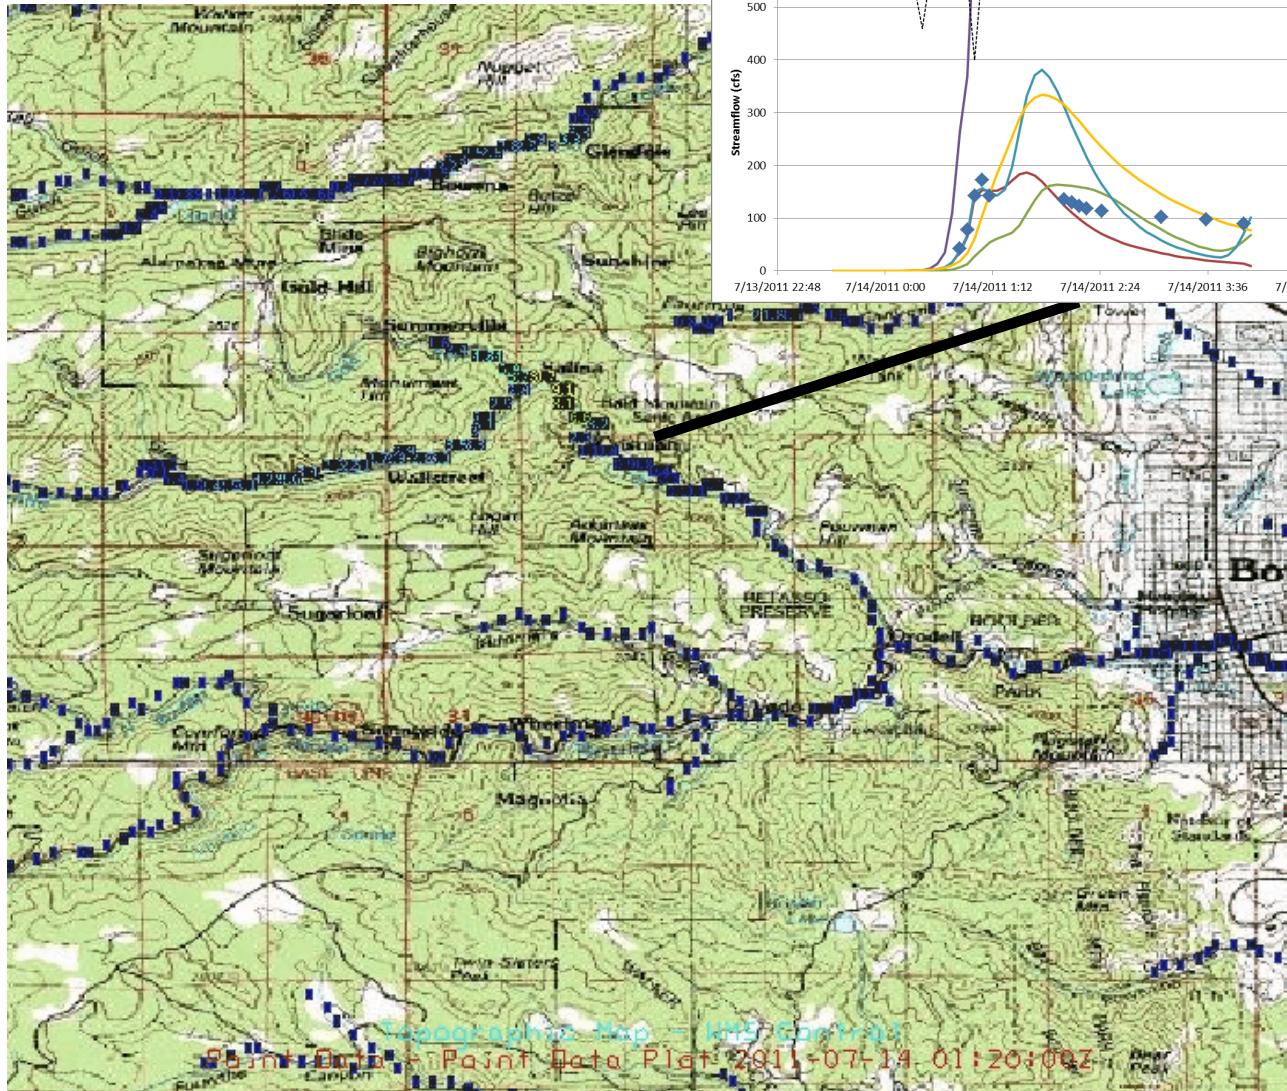

# Initial Results: WRF-Hydro Simulations

- Evaluation of simulated streamflow using multiple precipitation products: Aug. 8, 2008

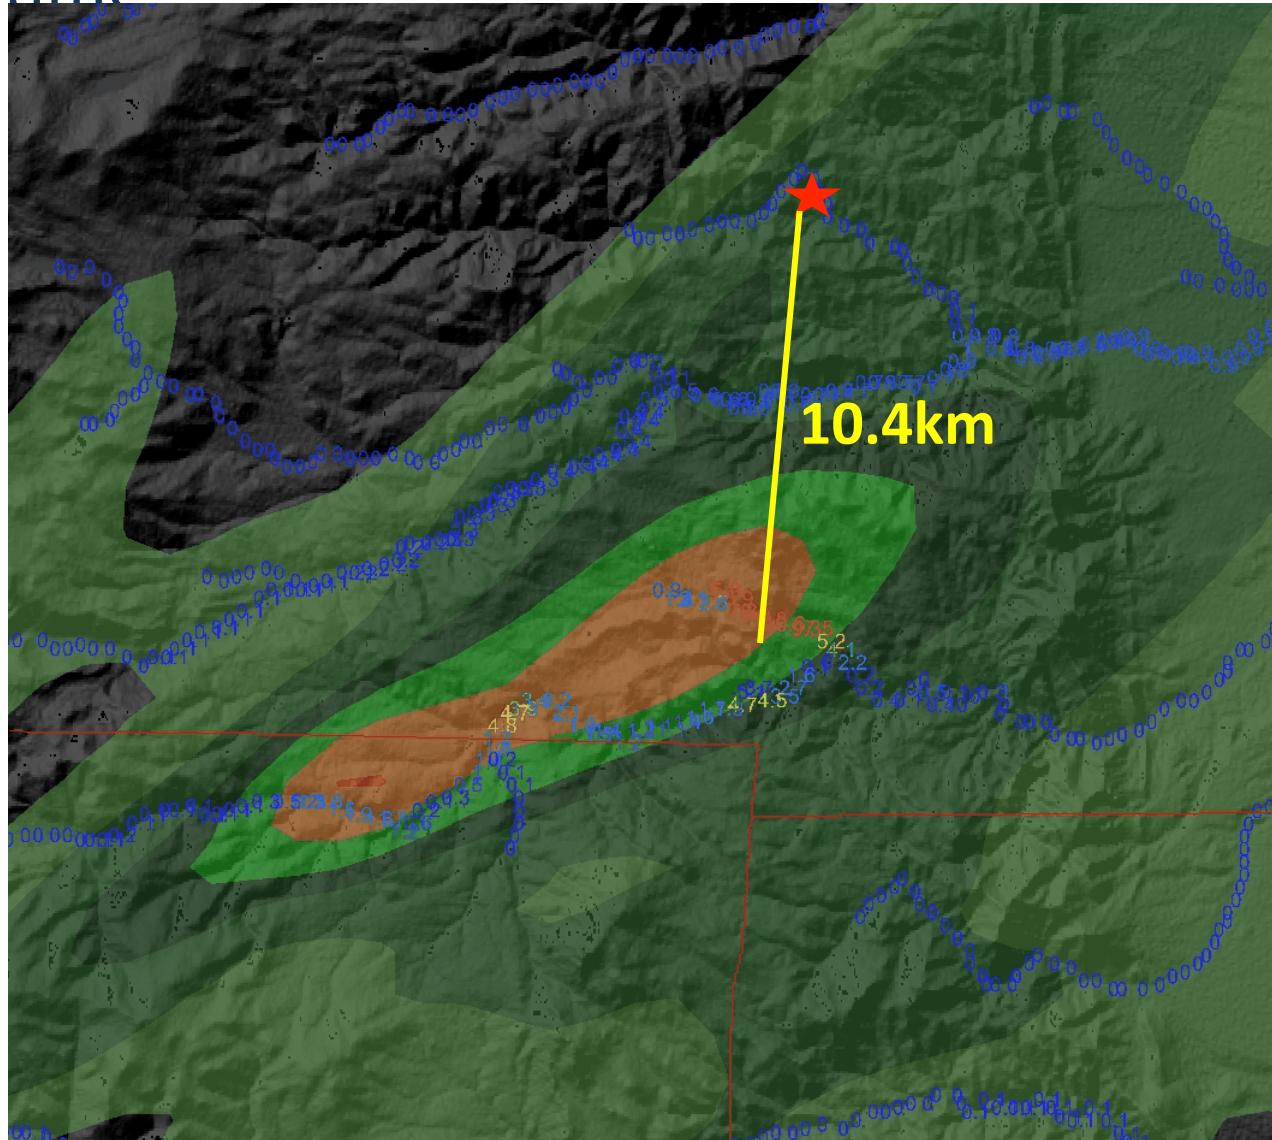

- Here the QPE is provided by the CSU-CHILL dual-polarimetric radar.
- Noah and CHILL QPE precipitation on a 1km grid, NDHMS routing executed on a 100m
- NDHMS-Noah is un-calibrated
- LIS-NDHMS coupling near complete...

# July 13, 2011 Fourmile Canyon Flood Event: Hydrologic Simulation

# July 13, 2011 Fourmile Canyon Flood Event: Coupled WRF-Hydro/RTFDDA model prediction...~12 hour lead time

# WRF-Hydro Software Features

- Modularized F90 and integrated in the WRF, HLDAS, CESM systems and NASA-LIS
- Coupling options are specified at compilation and WRF-Hydro is compiled as a new library in WRF
- Physics options are switch-activated though a namelist
- Fully-parallelized to HPC systems (e.g. NCAR supercomputer) and ‘very good’ scaling performance
- Ported to different systems and a variety of compilers
- WRF-Hydro model can represent better the important hydrological process over complicated topography and facilitate the streamflow forecasting, as well as the regional climate research

# Future Work

- Model Scheme
  - Load balance
  - IO for large area application
  - Implicit time integration scheme for channel routing
- Data Assimilation
  - Surface radar data

*Thank you !*
